

Impax Large Cap Fund

Q4 Fact Sheet | All data as of 12/31/2023

Investment overview

A core equity strategy that fully integrates analysis of sustainability risks and opportunities and invests in companies that have strong prospects and attractive valuations.

- The Fund uses a proprietary sustainability lens and ESG research to better manage sustainability risks and identify opportunities
- Bottom-up stock selection focuses on identifying companies with favorable business trends, strong management, and potential catalysts that can drive stock price appreciation.
- Disciplined valuation process evaluates long-term upside potential and downside risk.
- A high conviction portfolio of 40 to 60 stocks that is closely monitored to limit unintended sector and portfolio risk exposures and to maintain a consistent core investment style.
- Promotes improved corporate outcomes through shareholder engagement program and proxy voting efforts.

Performance

	Cumulative returns (%)			Average annual returns (%)

Important information

RISK: Equity investments are subject to market fluctuations, the fund's share price can fall because of weakness in the broad market, a particular industry, or specific holdings. The Pax Large Cap Fund is new and has a limited operating history. The Fund is actively managed. The investment techniques and decisions of the investment adviser and the Fund's portfolio manager(s), including the investment adviser's assessment of a company's ESG profile when selecting investments for the Fund, may not produce the desired results and may adversely impact the Fund's performance, including relative to other Funds that do not consider ESG factors or come to different conclusions regarding such factors.

Environmental, social, and governance (ESG) criteria are a set of standards for a company's operations that socially conscious investors use to screen potential investments. Environmental criteria consider how a company performs as a steward of nature. Social criteria examine how it manages relationships with employees, suppliers, customers, and the communities where it operates. These funds typically have an average price-to-earnings ratio, price-to-book ratio, and three-year sales-per-share growth value, compared to the S&P 500 Index.

Figures include reinvested dividends, capital gains distributions, and changes in principal value.

The **S&P 500 Index** is an unmanaged index of large capitalization common stocks.

Lipper Large-Cap Core Funds Index invests at least 75% of their equity assets in companies with market capitalizations (on a three-year weighted basis) greater than 300% of their dollar-weighted median market capitalization of the middle 1,000 securities of the S&P SuperComposite 1500 Index. Large-cap core funds have more latitude in the companies in which they invest. These funds typically have an average price-to-earnings ratio, price-to-book ratio, and three-year sales-per-share growth value, compared to the S&P 500 Index.

One cannot invest directly in an index.

The Morningstar style box is a nine-square grid that classifies securities by size along the vertical axis and by style (Value and Growth Characteristics) along the horizontal axis. Morningstar's equity style methodology uses a building block, holdings-based approach. Funds are classified as large, mid, or small based on the market capitalization of its portfolio holdings. Style is determined at the stock level and then those attributes are rolled up to determine the overall investment style of a fund.

Weighted Average is an average in which each quantity to be averaged is assigned a weight. These weightings determine the relative importance of each quantity on the average.

Standard Deviation measures a Fund's variation around its mean performance; a high standard deviation implies greater volatility.

Beta reflects the sensitivity of a Fund's return to fluctuations in its benchmark; a beta for a benchmark is 1.00: a beta greater than 1.00 indicates above average volatility and risk.

Alpha is a coefficient measuring risk-adjusted performance, considering the risk due to the specific security, rather than the overall market. A positive alpha reflects relative risk-adjusted performance of the Fund versus its benchmark.

R-Squared is a measure of how much a portfolio's performance can be explained by the returns from the overall market (or a benchmark index). The measure ranges from 0, which means that the Fund's performance bears no relationship to the performance of the benchmark, to 100, which means that the Fund's performance is perfectly synchronized with the performance of the benchmark.
